

PROFESSIONAL SUMMARY

Software Engineer experienced in designing distributed web applications, scalable cloud infrastructure (AWS, Azure, GCP), and secure data pipelines. Focused on building highly reliable systems, ensuring strict data integrity, and delivering seamless user experiences.

SKILLS

- **Languages:** TypeScript, Python, Java, SQL
- **Cloud & DevOps:** Azure, Docker, Kubernetes, Terraform, GitHub Actions, CI/CD
- **Frontend & Backend:** React, Next.js, Node.js, Fastify, Express.js, CSS/HTML, Redux, Redis
- **Data:** Databricks, Delta Lake, PySpark, ETL/Data Pipelines
- **Testing:** Playwright, Vitest, React Testing Library

PROFESSIONAL EXPERIENCE

Software Engineer Intern | ABB

April 2026 - Present

- **Incident Resolution:** Diagnosed and resolved a production schema validation defect restoring cart checkout for ~75% of products.
- **Distributed Automation Platform:** Built a modular Test engine covering 170+ regional instances, containerised via Docker on Azure Container Apps with CI/CD integration.
- **Real-Time Tooling & Reliability:** Built a React dashboard with real-time SSE log streaming and engineered a self-healing state recovery mechanism to prevent false test failures.
- **Cost optimization:** Re-architected an internal vendor tool during downtime, modernizing legacy tool and saving ~€15K/year.

TECHNICAL PROJECTS

Lawyer Website & CMS Migration

- Engineered a mobile-first statically generated Next.js web application deployed on AWS S3, migrating legacy raw HTML to Markdown via custom Node.js pipelines.

Lego Auction Platform

- Architected distributed backend using Java REST APIs, Azure Functions, and Databricks Spark.
- Engineered two-level Redis caching, slashing p99 latency from 3.5s to 153ms.
- Migrated stack to Docker, Kubernetes, and MongoDB to eliminate cloud vendor lock-in.

Student Testing Platform

- Led frontend architecture using React, managing API integrations and secure global state for distinct student and teacher interfaces.
- Implemented client-side authorization flows, managing secure session access and route guarding for authenticated users.

EDUCATION

Bachelor in Computer Science | AGH University of Kraków (GPA 4.57/5)

Oct 2023 - Feb 2027

- **Erasmus Semester:** NOVA School of Science and Technology (Sep 2025 – Jan 2026)
- **Honors & Activities:** Rector's Scholarship, Software Mansion x Gemini Hackathon

Cloud & Data Engineering Practicum | SoftServe Databricks Academy

June 2026 - Present

- **Streaming Ingestion:** Built streaming pipelines in Azure Databricks ingesting real-time feeds via Event Hubs and files via Auto Loader into Bronze Delta tables.
- **Medallion & Governance:** Modeled Silver/Gold Delta layers (PySpark/SQL) with SCD Type 1/2 merges, Unity Catalog security policies (RLS/CLS), and Terraform automation.

LANGUAGES & CERTIFICATION

- Languages: English, Ukrainian, Polish
- Certificates: Principles of UI/UX Design, Frontend Developer (React), Developing Back-End Apps with Node.js and Express
