PROFESSIONAL SUMMARY

Software Engineer experienced in designing distributed web applications, scalable cloud infrastructure (AWS, Azure, GCP), and secure data pipelines. Focused on building highly reliable systems, ensuring strict data integrity, and delivering seamless user experiences.

SKILLS

- **Languages:** TypeScript, JavaScript, Python, Java, C++, SQL, NoSQL
- **Cloud & Architecture:** Azure Container Apps, AWS S3, Google Cloud Platform (GCP), Docker, Kubernetes, Databricks, REST APIs, OAuth
- **Frontend & Backend:** React, Next.js, Node.js, Fastify, Express.js, Tailwind CSS
- **Testing:** Playwright, Vitest, React Testing Library

PROFESSIONAL EXPERIENCE

Testing Processes & Automation Intern | ABB

April 2026 - Present

- **Platform & Cloud:** Engineered a distributed test automation platform, deploying containerized Docker suites via Azure Container Apps and GitHub Actions to scale across 170+ regional instances.
- **Frontend & API:** Built a custom REST API and React dashboard utilizing real-time SSE log streaming for remote test configuration and execution.
- **Reliability:** Architected a self-healing state-recovery mechanism that eliminates false failures during extensive regression runs.

TECHNICAL PROJECTS

Student Testing Platform

- Led frontend architecture using React, managing API integrations and secure global state for distinct student and teacher interfaces.
- Implemented client-side authorization flows, managing secure session access and route guarding for authenticated users.

Beauty Services Application

- Integrated the Google Places API via Google Cloud Platform (GCP) to query, retrieve, and parse real-time location and service data into a responsive frontend interface.

Embedded Hardware Architecture

- Engineered C++ microcontroller firmware on an STM32F429 board utilizing FreeRTOS for task scheduling.
- Configured the precise I2C hardware pin layout, mapping alternate functions to pins PA8 and PC9 for optimized hardware-level sensor communication.

Lawyer Website & CMS Migration

- Engineered a statically generated Next.js web application deployed on AWS S3, migrating legacy raw HTML to Markdown via custom Node.js pipelines.

EDUCATION

Bachelor in Computer Science | AGH University of Krakow (GPA 4.57/5)

Oct 2023 - Feb 2027

- **Erasmus Semester:** NOVA School of Science and Technology (Sep 2025 – Jan 2026)
- **Honors & Activities:** Rector's Scholarship, Software Mansion x Gemini Hackathon

Data Engineering Trainee | SoftServe Databricks Academy

June 2026 - Present

- Selected for a competitive cloud infrastructure pipeline. Built scalable ETL pipelines using PySpark and SQL in Azure, utilizing Auto Loader for incremental data streaming.
- Designed secure Medallion schemas in Delta Lake, implementing strict data validation constraints and SCD transformations.

LANGUAGES & CERTIFICATION

- **Languages:** English, Ukrainian, Polish
- **Certificates:** Software Engineer, Principles of UI/UX Design, Frontend Developer (React), Developing Back-End Apps with Node.js and Express
