PROFESSIONAL SUMMARY

3rd year CS student at AGH University, Kraków (**GPA 4.73/5**), with an Erasmus semester at NOVA School of Science and Technology in Lisbon. I work across the full-stack – frontend, backend, deployment – and just do whatever the project needs.

SKILLS

- **Languages:** Java, TypeScript, JavaScript, SQL/NoSQL
- **Frameworks/Tools:** React, Next.js, Node.js, Express.js, Tailwind CSS, Redis, Playwright
- **Cloud & DevOps:** Azure, AWS, Docker, Kubernetes, GitHub Actions, Git

WORK EXPERIENCE

Testing Processes & Automation Intern | ABB

April 2026 - Present

- Built a test automation engine from scratch using **TypeScript** and **Playwright** for the eConfigure web app, configuring ESLint, Prettier, and local scripts.
- Designed a **dual-mode** system ("Strict" vs "Report-Only") to catch application errors during regression runs without breaking builds.
- Built a flexible abstraction layer to support testing across different application variants with entirely distinct DOM architectures.
- Found and reported dozens of bugs, delivering a stable regression testing framework and writing all technical documentation.

Tech: Typescript, Playwright, GitHub Actions, ESLint, Prettier, Husky

RECENT PROJECTS

Lawyer Website Redesign & CMS | advocate.matviiv.com

Nov 2025 - Feb 2026

- Built a statically generated Next.js site deployed on AWS S3, with Keystatic CMS so the client can publish articles without touching code.
- Engineered a custom Node.js migration pipeline using Turndown to convert the old site's messy raw HTML into clean Markdown.
- Built mobile-first from scratch with Tailwind CSS and applied TDD throughout using Vitest and React Testing Library.

Tech: Next.js, React, Tailwind CSS, Keystatic CMS, AWS S3, Node.js, Vitest, React Testing Library

Cloud-Native Lego Auction Platform | Private Repository

Sep 2025 - Nov 2025

- Designed a two-level Redis caching strategy; load tests confirmed it eliminated all **46 ETIMEDOUT** failures, cut mean response time by **57% (180ms to 77ms)** and **p99** latency from **3.5s to 153ms**.
- Found and fixed a critical security flaw: unauthenticated endpoints were accepting data modifications under high request volume.
- Re-deployed the entire platform using Docker, Kubernetes, and MongoDB to remove Azure vendor lock-in.

Tech: Java, Maven, Azure (App Service, Cosmos DB, Blob Storage, Redis Cache, Azure Functions), Apache Spark (Databricks), Artillery, Faker.js, Docker, Kubernetes, MongoDB

EDUCATION

- **Bachelor of Computer Science in AGH university of Krakow** Oct 2023 - Feb 2027
- **Erasmus studies in NOVA School of Science and Technology** Sep 2025 - Jan 2026

ADDITIONAL INFORMATION

- **Languages:** English, Ukrainian, Polish
- **Awards/Activities:** Rectors scholarship in AGH university of Krakow, Participation in Deployed's Frontend workshop
- **Certificates:** [Software Engineer](#), [Principles of UI/UX Design](#), [Developing Back-End Apps with Node.js and Express](#), [Frontend Developer \(React\)](#)
