

PROFESSIONAL SUMMARY

Software Engineer experienced in designing distributed web applications, scalable cloud infrastructure (AWS, Azure, GCP), and secure data pipelines. Focused on building highly reliable systems, ensuring strict data integrity, and delivering seamless user experiences.

SKILLS

- **Languages:** TypeScript, JavaScript, Python, SQL
- **Cloud & DevOps:** Azure, Docker, Kubernetes, GitHub Actions, CI/CD
- **Frontend & Backend:** React, Next.js, Node.js, Fastify, Express.js, Tailwind CSS, Redux
- **Data:** Databricks, Delta Lake, PySpark, ETL/Data Pipelines
- **Testing:** Playwright, Vitest, React Testing Library

PROFESSIONAL EXPERIENCE

Software Engineer Intern | ABB

April 2026 - Present

- **Full-stack & Incident Resolution:** Developed core features across eConfigure and Critical Power. Diagnosed and resolved a production schema validation defect restoring cart checkout for ~75% of products.
- **Distributed Automation Platform:** Built a modular Test engine covering 170+ regional instances, containerised via Docker on Azure Container Apps with CI/CD integration.
- **Real-Time Tooling & Reliability:** Built a React dashboard with real-time SSE log streaming and engineered a seft-healing state recovery mechanism to prevent false test failures.
- **Cost optimization:** Re-architected an internal vendor tool during downtime, modernizing legacy tool and saving ~€15K/year.

TECHNICAL PROJECTS

Student Testing Platform

- Led frontend architecture using React, managing API integrations and secure global state for distinct student and teacher interfaces.
- Implemented client-side authorization flows, managing secure session access and route guarding for authenticated users.

Embedded Hardware Architecture

- Engineered C++ microcontroller firmware on an STM32F429 board utilizing FreeRTOS for task scheduling.
- Configured the precise I2C hardware pin layout, mapping alternate functions to pins PA8 and PC9 for optimized hardware-level sensor communication.

Lawyer Website & CMS Migration

- Engineered a mobile-first statically generated Next.js web application deployed on AWS S3, migrating legacy raw HTML to Markdown via custom Node.js pipelines.

EDUCATION

Bachelor in Computer Science | AGH University of Krakow (GPA 4.57/5)

Oct 2023 - Feb 2027

- **Erasmus Semester:** NOVA School of Science and Technology (Sep 2025 – Jan 2026)
- **Honors & Activities:** Rector's Scholarship, Software Mansion x Gemini Hackathon

Data Engineering Trainee | SoftServe Databricks Academy

June 2026 - Present

- **Streaming & Ingestion:** Build streaming pipelines in Azure Databricks ingesting real-time API feeds via Azure Event Hubs and JSON files using Auto Loader into Bronze Delta tables.
- **Medalion Architecture & Analytics:** Modeled Silver and Gold Delta layers in PySpark/SQL, implementing data quality constraints, SDC Type 1/2 merges, and aggregated business analytics tables.

LANGUAGES & CERTIFICATION

- Languages: English, Ukrainian, Polish
- Certificates: Software Engineer, Principles of UI/UX Design, Frontend Developer (React), Developing Back-End Apps with Node.js and Express
